

Mahyco has been a pioneer in India in bringing science-based solutions to resolve farming challenges and to improve crop productivity. We have used “**Seed**” as a medium to deliver our scientific innovations for improving farm productivity for the last six decades in India.

Amongst the core of the values driving Mahyco, farmers’ interest has always been at the top. As we believe that our experience and ability gained in seed science over the years in India would be useful to farmers in other geographies with similar farm profile, we have expanded our presence in Southeast Asia and Africa during last few years through Mahyco International Pte. Ltd.(**mipl**), our international business entity.

We look forward to adding significant value to farmers through crop productivity improvement using modern seed technology and innovation in the areas of operations of **mipl**.

Best wishes

**Dr. Rajendra Barwale**
